GCSE **CHEMISTRY**

Higher Tier Paper 1

Thursday 16 May 2019

Time allowed: 1 hour 45 minutes

Materials

For this paper you must have:

- a ruler
- a scientific calculator
- the periodic table (enclosed).

Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- Do all rough work in this book. Cross through any work you do not want to be marked.
- In all calculations, show clearly how you work out your answer.

Information

- The maximum mark for this paper is 100.
- The marks for questions are shown in brackets.
- You are expected to use a calculator where appropriate.
- You are reminded of the need for good English and clear presentation in your answers.

Morning

Do not write outside the box

Answer **all** questions in the spaces provided.

0 1

This question is about the periodic table.

In the 19th century, some scientists tried to classify the elements by arranging them in order of their atomic weights.

Figure 1 shows the periodic table Mendeleev produced in 1869.

His periodic table was more widely accepted than previous versions.

	Group 1	Group 2	Group 3	Group 4	Group 5	Group 6	Group 7
Period 1	н						
Period 2	Li	Ве	В	С	N	0	F
Period 3	Na	Mg	Al	Si	Р	S	Cl
Period 4	K Cu	Ca Zn	*	Ti *	V As	Cr Se	Mn Br
Period 5	Rb Ag	Sr Cd	Y In	Zr Sn	Nb Sb	Mo Te	*

Figure 1

0 1 . 1

The atomic weight of tellurium (Te) is 128 and that of iodine (I) is 127

Why did Mendeleev reverse the order of these two elements?

[1 mark]

0 1.2	Mendeleev left spaces marked with an asterisk *	
	He left these spaces because he thought missing elements belonged	there.
	Why did Mendeleev's periodic table become more widely accepted the	nan previous
	versions?	[3 marks]
0 1.3	Mendeleev arranged the elements in order of their atomic weight.	
	What is the modern name for atomic weight?	[1 mark]
	Tick (✓) one box.	[1 mark]
	Atomic number	
	Mass number	
	Relative atomic mass	
	Relative formula mass	
0 1.4	Complete the sentence.	
		[1 mark]
	In the modern periodic table, the elements are arranged in order of

	Question 8 continues on the next page	
08.2	Explain why the excess hydrogen must be burned off. [2 marks]	
	[1 mark]	
0 8.1	Suggest one reason why step 8 is needed.	Do not write outside the box

 Table 5 shows the teacher's results.

Table 5

	Mass in g
Tube A empty	105.72
Tube A and oxide of copper before heating	115.47
Tube A and contents after 2 minutes	114.62
Tube A and contents after 4 minutes	114.38
Tube A and contents after 6 minutes	114.38
Tube B and contents at start	120.93
Tube B and contents at end	123.38

When an oxide of copper is heated in a stream of hydrogen, the word equation for the reaction is:

copper oxide + hydrogen \rightarrow copper + water

Do not write outside the

box

08.3	Determine the mass of copper and the mass of water produced in this experiment.
	Use Table 5. [2 marks]
	Mass of copper = g
	Mass of water = g
0 8.4	The teacher repeated the experiment with a different sample of the oxide of copper.
	The teacher found that the oxide of copper produced 2.54 g of copper and 0.72 g of water.
	Two possible equations for the reaction are:
	Equation 1: $Cu_2O + H_2 \rightarrow 2Cu + H_2O$
	Equation 2: CuO + H ₂ \rightarrow Cu + H ₂ O
	Determine which is the correct equation for the reaction in the teacher's experiment.
	Relative atomic masses (A_r): H = 1 O = 16 Cu = 63.5 [3 marks]
	Turn over for the next question

09	A student investigated the temperature change in the reaction between dilute sulfuric acid and potassium hydroxide solution.	box
	This is the method used.	
	1. Measure 25.0 cm ³ potassium hydroxide solution into a polystyrene cup.	
	2. Record the temperature of the solution.	
	3. Add 2.0 cm ³ dilute sulfuric acid.	
	4. Stir the solution.	
	5. Record the temperature of the solution.	
	6. Repeat steps 3 to 5 until a total of 20.0 cm ³ dilute sulfuric acid has been added.	
09.1	Suggest why the student used a polystyrene cup rather than a glass beaker for the	
	reaction. [2 marks]	
	Question 9 continues on the next page	

Do not write outside the box

Table 6 shows some of the student's results.

Volume of dilute sulfuric acid added in cm ³	Temperature in °C
0.0	18.9
2.0	21.7
4.0	23.6
6.0	25.0
8.0	26.1
10.0	27.1

Figure 11 shows some of the data from the investigation.

Figure 11

09.2	Complete Figure 11:		Do not write outside the box
<u> </u>	 plot the data from Table 6 draw a line of best fit through these points extend the lines of best fit until they cross. 		
		4 marks]	
09.3	Determine the volume of dilute sulfuric acid needed to react completely with 25.0 cm ³ of the potassium hydroxide solution.		
	Use Figure 11.	[1 mark]	
	Volume of dilute sulfuric acid to react completely =	cm ³	
09.4	Determine the overall temperature change when the reaction is complete.		
	Use Figure 11.	[1 mark]	
	Overall temperature change =	•C	
	Question 9 continues on the next page		

IB/G/Jun19/8462/1H

		Do not write	
09.5	The student repeated the investigation.	outside the box	
	The student used solutions that had different concentrations from the first investigation.		
	The student found that 15.5 cm ³ of 0.500 mol/dm ³ dilute sulfuric acid completely reacted with 25.0 cm ³ of potassium hydroxide solution.		
	The equation for the reaction is:		
	$2 \text{ KOH } + \text{H}_2 \text{SO}_4 \ \rightarrow \ \text{K}_2 \text{SO}_4 \ + \ 2 \text{H}_2 \text{O}$		
Calculate the concentration of the potassium hydroxide solution in mol/dm ³ and in g/dm ³			
	Relative atomic masses (A_r): H = 1 O = 16 K = 39 [6 marks]		
	Concentration in mol/dm ³ = mol/dm ³		
	Concentration in $g/dm^3 = $ g/dm ³
